

Are your Call Recordings PCI Compliant? Redact Sensitive Data with CallMiner Redactor

CallMiner Redactor uses speech technology to automatically remove PCI sensitive authentication and cardholder data from your incoming call recordings or call recording archives. When PCI sensitive information such as account numbers or security codes is spoken, the audio is muted—taking your contact center recordings out of PCI scope.

Agent

Can I please have your credit card number?

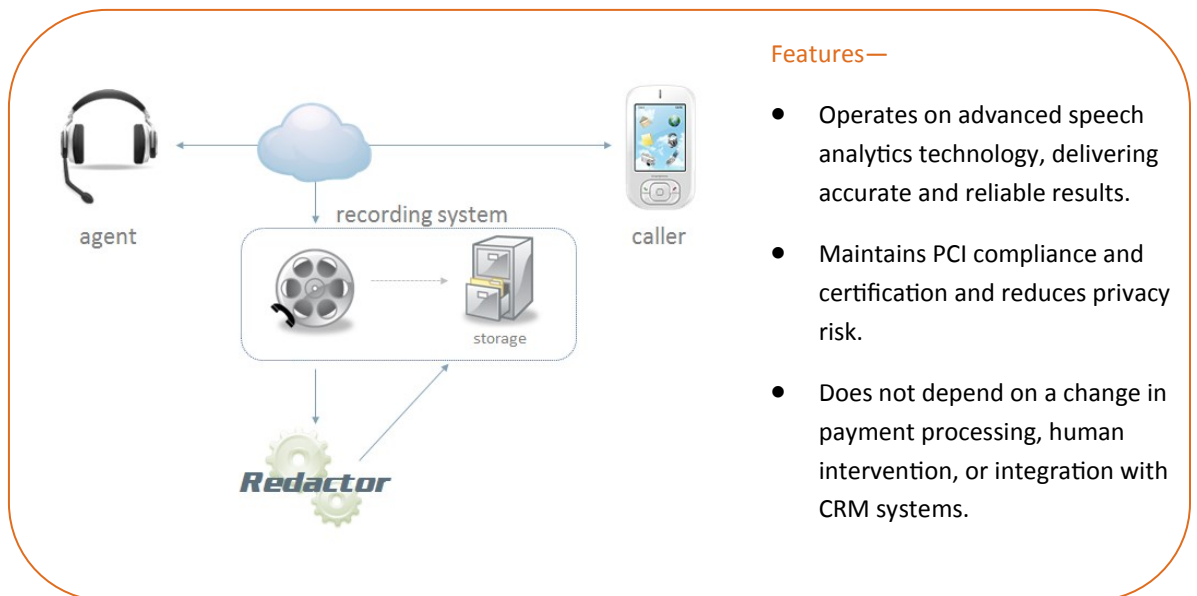

Sure. It's _____

_____ ...

Customer
